

Bring Your Own Device

Greetings families,

We are very excited to have ***your child's class*** piloting the Bring Your Own Device (BYOD) program beginning in October. After the initial pilot, we will roll-out school wide in the Spring. This program allows your child to bring their own technology into the classroom, if this is an opportunity your family would like to participate in. Use of the technology will be integrated meaningfully into lessons. This will include research, assessments, interactive collaboration, and final products from project-based learning opportunities.

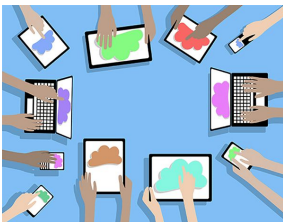

Prior to having students bring in their device, we are having an informational meeting for parents on Wednesday, October 21, 2015 from 5:30-6:15 p.m. in the Media Center. For your convenience this is prior to the ONE Hunter event. Please follow the Google link below to RSVP for this informational session before Monday, October 19, 2015, or call 919-856-7676 to let us know you can come.

We will walk you through the steps of setting up the BYOD WiFi, so if possible please bring the intended device.

Many questions will be answered at the information session, however, two key questions are:

- Does my child have to have a device? -- Answer -- Absolutely not -- this is a family's choice!
- If my child does not have a device, will s/he still be able to participate in technology learning experiences? -- Answer -- Absolutely -- just as s/he is now!

We look forward to exploring this new educational opportunity with you and your child this year!

The BYOD Team
