PROJECT SUMMARY

- Students will create a public service announcement that can be shared in various formats, targeting their school community or wider audiences. This could involve a presentation at a school assembly, posting on social media, or creating informational flyers to distribute in the community. The goal is to raise awareness and encourage action regarding the protection of endangered animals.

DRIVING QUESTION

- How can we effectively communicate the urgency of protecting endangered animals and inspire our community to take action?
- What are some of the main environmental issues in our community and what are some positive changes we can make to combat these issues?¿Cómo puedo ayudar a resolver un problema del medio ambiente en mi comunidad?

SUSTAINED INQUIRY & AUTHENTICITY

- This project connects to real-world issues by highlighting the ongoing crisis of endangered species due to human activity, such as habitat destruction and climate change. Students will explore local and global examples of endangered animals, examining the ecological impacts of their decline. They will engage with the community to understand how everyday choices affect wildlife and discuss potential solutions to promote awareness and conservation efforts.

STUDENT VOICE & CHOICE WITH PUBLIC PRODUCTS

- Students created informational videos for the community.

TEACHER REFLECTION

- This project fit so well with the book we were reading. The students did a great job with their videos. One thing I will do next time is give a little more time for recording and editing. Overall, I was really impressed with how this went!

STUDENT REFLECTIONS

- "We really learned how to adapt to the requirements. Some things weren't working in our favor, so we had to find a way to fix it. Our video was over the time limit, so we had to adjust clips to make it shorter."
- "It was fun to work with Canva and hone in on the video editing skills for this product."

NOTED SKILLS GAINED

- RESEARCHING
- CANVA
- ORGANIZATION
- TEAMWORK
