

Futuristic Animals

By Ramya and Esha

INTRODUCTION

Futuristic animals are robotic animals that would be useful to humans in the future. As an example, futuristic butterflies can pollinate flowers. In the same way, futuristic bees can make honey for human beings. Futuristic animals would do many important things which make our life easier. Here are a few examples of futuristic animals that we would like to show you.....!

OWL

This is an owl one of the futuristic animals. They are furry and colorful. Owls are also able to fly. Owls are really beautiful creatures. There are many different kinds of owls like snow owls, brown owls, zurgan owls and many more. Owls have really sharp beaks. You can see them at many zoos.

ZEBRA

Zebras are African animals. They are a part of the horse family. Zebras are a type of futuristic animal. Zebras are black with white stripes or white with black stripes. They have different patterns on their bodies. They live in a variety of habitats such as grasslands, savannas, woodlands, thorny scrublands, mountains, and coastal hills.

HORSE

A female horse is called a mare and a male horse is called a colt. Horses can be seen at farms or other ranches. Horses that are in the wild are free. Horses are many colors like brown, white, bronze, and grey. Horses are very popular and they are used in competitions, parades and other activities.

RHINOCEROS

© Alamy

A rhinoceros is the second-largest land mammal on Earth. They live in Asia and Africa, in swamps and grasslands. They have a large body and a small brain. They have a horn and thick, protective skin. They are herbivorous (plant eating animals). Rhinoceros are often hunted by humans for their horns.

DRAGONFLY

Dragonflies live in almost all parts of the world and prefer to live next to ponds and streams. They feed on tadpoles, tiny fish and insects. They don't sting or bite and don't carry germs or diseases. They look pretty and fly amazingly. Dragonflies live only for a few weeks!

CHAMELEONS

Chameleons are reptiles that live in Africa, Asia and Southern Europe. They change colors based on their moods and surroundings. Their tongues can reach out to 26 times their size to catch insects for food. Surprisingly, chameleons are deaf. They also have eyes that can swivel so they can look at two things at the same time!

BUTTERFLY

Butterflies live all around the world. They feed on nectar from flowers. They have four stages of life - egg, caterpillar, pupa and adult butterfly. They have bright colored wings and patterns made up of tiny scales. Monarch butterflies (a type of butterfly) migrate long distances for the winter.
