

SummerSTEM Challenge... 2019

The kit came with a set of precise instructions.
That made him happy. He was very good at
following directions.

"Going Places" by (Paul and Peter Reynolds)

YORK Elementary School is going places! So why not join them? Next school year we will be traveling around the world working on different engineering challenges. So why not join them???

This summer be like Maya and build a go cart from just these materials. When school starts we will test them out and see how you did! Buckle up and get ready for an exciting adventure in "Going Places" at York Elementary School!

Materials needed:

Cereal Box

Tape

Scissors

Straws (can be multiple sizes)

Foam Trays

Paperclips

Plan: Build your own go-cart to take you places. We will race them at the start of the year.

Draw and label your go-cart that you will make.

Improvement: What did you have to reengineer in order for it to run smoothly? What did you have to fix?
