

Graduate Spotlight

Devin Martin - Class of 2008

Applications Engineer

“I provide support for clients who need help figuring out how to model a specific part, and I also provide training for companies, teaching them how to use SolidWorks.”

“The classes I took at southeast were VERY helpful in leading me to this career. The Drafting 1,2 &3 courses gave me a really good understanding of drawing and dimensioning, AutoCAD, and ANSI standards, and the PLTW IED class, where we used Autodesk Inventor and 3D Studio Max were also great experiences by helping me learn about solid modeling and gave me some exposure when I started learning SolidWorks in college.”

“I participated in soccer and track while at Southeast. This helped me develop great team and social skills which have become one of my biggest selling points as an engineer (not the typical awkward engineer).”
