GLOBAL POINTS OF PROGRESS -- Bangladesh: Farmers are embracing an agricultural evolution, which uses innovative methods such as dike gardens, or growing vegetables in sacks beside rivers, to succeed in a shifting environment. Even as climate change threatens to displace 1 in 7 people in Bangladesh by 2050, the country is adapting. These new methods have helped some farmers increase their harvests nearly fivefold. Others are surviving by turning to new professions, such as fish farming and shrimp farming, which have been made more profitable by rising sea levels.
