GLOBAL POINTS OF PROGRESS -- Galapagos Islands: A centenarian tortoise named Diego who fathered more than one-third of its living species is returning to its island of origin on the Galapagos from a captive breeding program on the islands to join hundreds of his progeny. Diego was one of 15 tortoises selected for the program, which was begun in the mid-1960s to save the species. Prior to that, Diego had lived in the San Diego Zoo for about 30 years. Out of the 2,000 tortoises bred in the program, Diego fathered nearly 800 of them, meaning he is responsible for about 40% of those on the Galapagos island of Espanola.
