GLOBAL POINTS OF PROGRESS - India: The state of Jharkhand is expanding farmers' irrigation capacity by distributing solar-powered pumps. About 37% of the eastern Indian state's nearly 30,500 square miles are viable for cultivation. However, net sown land only amounts to less than half of that, according to a 2019 report. Less than 6% of farmers have access to any irrigation equipment, relying instead on monsoon rain, which limits annual yields.
