### Capital Auditorium Campaign

In partnership with Broughton PTSA and Capital Foundation, we kicked off the Capital Auditorium Campaign last night! Please read below and the attached PDF that we are sending out to the community and alumni. We would love to have you all help us spread the word. There are so many ways to support, and all include perks! The Diane Payne Auditorium at Broughton High School has long been the center of activities for the Broughton community since 1929. It has hosted thousands of beautiful arts performances including, Band, Orchestra, Choir, Dance, and Theatre; it also serves as an important meeting space for student groups, new student orientations, PTA meetings and special ceremonies like the Awards Assembly, National Honor Society Inductions, Retirement Celebration, and the Candlelight Service. The auditorium has also played host to numerous dignitaries including Presidents, politicians, nationally renowned artists such as Golden Globe Winner Ariana DeBose, and most memorably, Dr. Martin Luther King, Jr. The space has served every facet of our school community and beyond, and now is in need of some care and attention. We are partnering with the Broughton PTA, Capital Foundation and Broughton High School to help bring some life back into our beautiful auditorium,

starting with new carpet! The total cost of the project is \$20,000 and we are hoping to fundraise \$10,000 of that with your support. We hope that because we all enjoy the opportunity to perform, meet, and socialize in this special space, we can all come together to help ensure that it will serve our community for many years to come!

**GLOBAL POINTS OF PROGRESS - United States:** A U.S. airline recently completed the first commercial flight using 100% sustainable aviation fuel. Air travel generates a billion metric tons of carbon dioxide emissions annually - the majority of which comes from commercial flights - and accounts for roughly 2% of global emissions. SAFs, which are typically made from a medley of biomass and waste resources such as grease or cooking oil, can achieve a similar performance as traditional jet fuel with a fraction of the carbon output.
