

## HOW TO BE A PHOTOGRAPHER WITH YOUR

# SMARTPHONE

The Equilibrium Yearbook Staff is going to need your help this year making sure we still have quality images to pair with the stories of this year. Use this guide to ensure you are taking the best pictures possible that you can share with us!

### TIP 1:

Turn on the camera's gridlines. Place subject of photo on the intersections. Take vertical and horizontal images.

### TIP 2:

Avoid large groups. Find the most interesting subject; focus on faces in places. Don't take pictures of backs of people, food in the mouth, anything embarrassing.

### TIP 3:

Don't use digital zoom. Use your legs to get close.

### TIP 4:

Use natural light, no flash. Subject should face natural light when possible.

### TIP 5:

Take candid (subject not posing for camera). Shoot emotions. Use portrait mode to control a busy, distracting background. DO NOT TILT PHONE. Hold it straight.

### TIP 6:

**DO NOT EDIT. DO NOT ADD FILTERS.**

Leave that to the yearbook staff.

### TIP 7:

Don't shoot subject in front of a window. Light from window will silhouette subject. If shooting portraits outdoors, place subject in the shade.
