

# FLU AND FEVER

## COULD THEY BE RELATED?

By Alex, Brandon and Rahul

Brandon and Rahul from second grade could tell you first hand that the flu and fever are definitely related. They have both had the flu and a fever with it. The flu contains some sort of virus that makes you have a sore throat, vomiting and a bad cough that leaves you feeling very sick. Then on top of that you run a high fever and your body feels very tired. This leaves you feeling weak and your body aches. All of this lasts about 2- 6 days. You are most likely to catch the flu in the middle of winter.

Since the flu is a viral disease, you cannot go to the doctors and get antibiotics to cure it.

Above,a fever virus in the blood stream.

Up above;the building of a virus.

**If you don't want to catch the flu and fever you should wear jackets when it is cold and wash your hands!**
