Unit Name: 2-Digit Addition

Common Core State Standards:

1.NBT.4 Add within 100, including adding a two-digit number and a one-digit number, and adding a two-digit number and a multiple of 10, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used. Understand that in adding two-digit numbers, one adds tens and tens, ones and ones; and sometimes it is necessary to compose a ten.

Essential Vocabulary:

Unit Overview:

First Grade Students use concrete materials, models, drawings and place value strategies to add within 100. They do so by being flexible with numbers as they use the base-ten system to solve problems. The standard algorithm of carrying or borrowing is neither an expectation nor a focus in First Grade. Students use strategies for addition and subtraction in Grades K-3. By the end of Third Grade students use a range of algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction to fluently add and subtract within 1000. Students are expected to fluently add and subtract multi-digit whole numbers using the standard algorithm by the end of Grade 4

Strategies/Skills:

First Grade Students use place value understanding and properties of operations to add and subtract. The students will:

- Use their knowledge of strategies and the place value system to add within 100.
- Explain and justify their thinking using materials, models, and/or drawings.
- Relate their chosen strategy to a writing method.
- Understand that a two-digit number is composed of tens and ones.
- Understand the concept of adding tens and ones separately.
- When adding, compose a ten drawing on their knowledge place value.
